

呼吸器・神経・膠原病内科（第一内科）

特別講演会

日時

2017年

10月25日 水 12:30-13:30

東12階病棟 カンファレンスルーム

講師

「Interferon-gamma: the pathway of a scientific career」

Howard A. Young, Ph.D.

Center for Cancer Research
National Cancer Institute, NIH, USA

Howard Young is a senior investigator in the Cancer and Inflammation Program at the US National Cancer Institute.

His scientific career includes being part of the team that cloned the RAS oncogene. This was followed by many years working on the regulation of Interferon-gamma gene expression and the consequences of inflammation caused by chronic Interferon-gamma protein expression.

He will talk about how asking a very basic research question has led to insight into diseases mechanisms and unexpected changes in host physiology.
